

Outlook[®]

herbicide

Supplemental Label

EPA Reg. No.: 7969-156

EPA SLN No.: ID-05006

FOR DISTRIBUTION AND USE OF OUTLOOK[®] HERBICIDE APPLIED EARLY POSTEMERGENCE IN POTATO FOR WEED CONTROL ONLY WITHIN IDAHO

FOLLOW ALL APPLICABLE DIRECTIONS, RESTRICTIONS, WORKER PROTECTION STANDARD REQUIREMENTS, AND PRECAUTIONS ON THE EPA REGISTERED MAIN LABEL FOR THIS PRODUCT.

THIS LABEL EXPIRES ON DECEMBER 31, 2005.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

All applicable directions, restrictions, precautions and **Conditions of Sale and Warranty** on the EPA-approved main label for **Outlook[®] herbicide** (EPA Reg. No 7969-156) must be followed. This supplemental label must be in the possession of the user at the time of application.

GENERAL INFORMATION

Outlook may be used as part of a weed management program in potato. When applied as directed, **Outlook** will provide soil residual control of annual grasses, annual broadleaf weeds, and sedges. See **Table 1** of EPA-approved main label for **Outlook** for complete list of weeds controlled.

The use of Outlook applied early postemergence in potatoes may result in leaf malformation, cupping, stunting, wrinkling, etc., of the exposed foliage. This injury has not been shown to result in yield loss. Newly emerged leaves after application are not affected.

Outlook will not control weeds that have emerged from soil. Application must be made to clean-tilled soil or with other herbicides that control emerged weeds.

APPLICATION INSTRUCTIONS

Method:

Outlook may only be applied early postemergence by chemigation. Uniformly apply **Outlook** in a minimum of 0.33 inches of water per acre. **DO NOT** apply by ground application or aerial application. Refer to EPA-approved main label for **Outlook** for specific instructions for application methods.

Timing:

Apply **Outlook** before potatoes reach the 6 inch stage of growth. **DO NOT** apply within 40 days of harvest.

Outlook may only be applied in a single application in potato.

The maximum **Outlook** use rates in a single application are 12 - 18 fluid ounces per acre on coarse-texture soils and 18 - 21 fluid ounces per acre on medium or fine-texture soils. **DO NOT** exceed the recommended rate by soil type in a single application.

Potato Tank Mixes:

Applications of **Outlook** may be made prior to, in tank mixture, or after the use of other herbicides labeled for early postemergence use in potatoes. Tank mix applications made with **Outlook** early postemergence in potatoes may result in increased injury compared to **Outlook** alone.

Read and follow the applicable **Restrictions and Limitations** and **Directions for Use** on all products involved in tank mixing. The most restrictive labeling applies to tank mixes.

Re-Cropping and Rotational Cropping:

In situations where **Outlook®** herbicide has been applied to potato and crop failure occurs due to adverse weather or other reasons, the re-planting (re-cropping) of potato is **not recommended**. If re-planting of a crop is necessary, plant any crop (e.g. corn, dry bean, grain sorghum, soybean) where a soil application of **Outlook** is registered. Do not make a second application of **Outlook** in re-cropping situations if the original application was broadcast. Fall-seeded cereal crops may be planted 4 months or more following an **Outlook** application.

There are no further rotational crop restrictions the spring following the previous year's application of **Outlook**. Refer to EPA-approved main label for **Outlook** for specific information.

Precautions and Limitations

Do not apply more than 21 fluid ounces of **Outlook** per acre, per season.

Refer to EPA-approved main label for **Outlook** for all other Restrictions and Limitations.

Endangered Plant Species

To avoid adverse effects on endangered plant species, applicators in potato production must comply with the following mitigation measures where endangered plant species occur in the counties listed in the table below:

Chemigation Applications

Leave a 35 foot untreated buffer between treatment area and endangered plant populations.

State	County
Idaho	Kootenai
